Settings and use of the transmitter

Auto-calibration

CP 111 pressure transmitter has a temperature compensation of the gain from 0 to 50 °C and an auto-calibration process that guarantees over the time an excellent stability and a perfect reliability of the measurement on low and high ranges.

Configuration

The configuration of the parameters can be done either with the DIP switch or via software (you cannot combine both solutions). To configure the transmitter, unscrew the 4 screws from the housing then open it. DIP switches allowing the different settings are then accessible.

To configure the transmitter, it must not be energized. Then, you can make the settings required, with the DIP switches (as shown on the drawing below). When the transmitter is configured, you can power it up.

For detailed combinations of DIP switches, refer to the CP 110 Quick Start Guide.

Configuration via PC

Refer to the user manual of the LCC-5 to make the configuration.

Connections

1. Solenoid valve (CP 111 only)
2. Left DIP switch
3. Right DIP switch
4. Pressure connections
5. Safety pressure connections
6. Autozero
7. LCC-5 software connection
8. Output terminal block
9. Power supply terminal block
10. Cable gland

Mounting

To mount the transmitter, mount the ABS plate on the wall (drilling: $\varnothing 6$ mm, screws and pins are supplied). Insert the transmitter on the fixing plate (see A on the drawing beside). Rotate the housing in clockwise direction until you hear a "click" which confirms that the transmitter is correctly installed.

Once the transmitter is installed and powered up, please make an autozero to guarantee the correct working of the transmitter in any position.

Maintenance: please avoid any aggressive solvent. Please protect the transmitter and its probes from any cleaning product containing formalin, that may be used for cleaning rooms or ducts.

Precautions for use: please always use the device in accordance with its intended use and within parameters described in the technical features in order not to compromise the protection ensured by the device.
